new heights

## Lemay and Ardoises Architecture

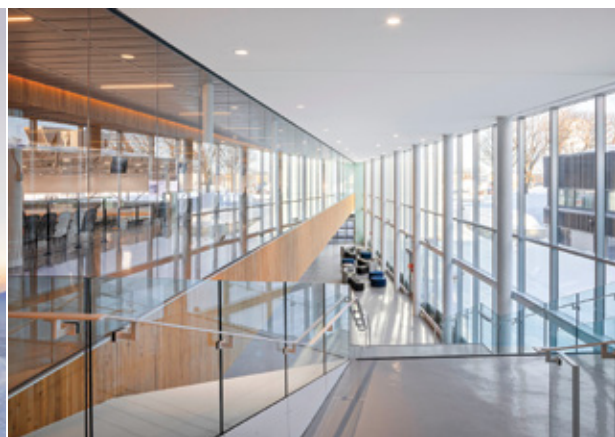

**project** Centre de glaces de Québec, Québec City, Canada.

**standout** Composed of fluidly continuous forms, this oval structure embodies the speed, dynamism, balance, and skill of the skaters—professional and amateur—who glide across the 145,000 square feet of ice comprising a 400-meter elliptical track and two Olympic-size rinks. A 360-degree ribbon of windows connects the interior to the rolling landscape outside, which includes a beloved community skating rink.

**photography** Stephane Groleau. ➤

"By focusing on absolute transparency, we have decompartmentalized the space to open it up to the community, connecting skaters to the outside world"
